

# Memphis Police Department

Inform RMS is a key component in Memphis Police Department's Real Time Crime Center (RTCC). The RTCC facilitates inter-agency cooperation between city, county, state and federal law enforcement, through a data and resource-sharing initiative. Plans including agencies within a 75-mile radius of Memphis gain access to databases with information such as local warrants, local criminal history records, local jail information, local property data, arrest affidavits, and more.

Memphis Police Department has partnered with the University of Memphis to create Operation Blue

CRUSH™. This program integrates crime statistics in a robust analysis effort that has proven to be effective in significantly reducing crime since in inception.

"The Memphis Police Department has had a very good experience with the Inform RMS system. The RMS product is easy to do custom reports against because the database is Microsoft SQL Server. MPD has taken advantage of this fact by creating statistical analysis reports with SPSS, Geo-coding the address information with ESRI's Arc Map software and then pushing the geo-coded data back to the database," said Major James Harvey of Memphis Police Department.
