

Every Second Counts. No Second Guessing.

But if you're like a lot of agencies, your communication center's system doesn't have a fast way to access and update the data you need right now. Your dispatchers are adapting their call processes around the way your current software company *thinks* Computer-Aided Dispatch (CAD) is supposed to work. Wasting valuable time looking at confusing screens and waiting for information on developing situations. Manually following up with paperwork and phone calls to fill out forms. You know it could be better.

Built With Flexibility, It Works For You.

Zuercher CAD is highly configurable, designed to let you customize everything from your incident code list to priority-based alarm times to flexible beat plans. You choose what fields or features you want to use to fit your agency's procedures. Configure your CAD to match your actual workflow.

An ideal solution for multi-jurisdictional environments, you can set up Zuercher CAD as a standalone product or in conjunction with the rest of the Zuercher Suite system for a tightly integrated solution. The system is made to perform with precision and reliability. However you choose to use it.

Speed When You Need It Most.

Every feature was built to increase your efficiency and decrease your response time. Choose what works the quickest for you: command line entry, click menus, drag-and-drop, or hot keys. Configure the system with your own command names and set up your own powerful combined commands that issue multiple actions at once.

Easy-to-use, color-coded displays can give you at-a-glance access to the unit and incident information you need. Customize your own display screen to see only the units and incidents that you care about at the moment. Get people where they need to be. Faster.

Real Time Is Your Time: You're in the Know.

Stay apprised of developing situations with real-time updates. Keep your officers safer and more efficient out in the field by keeping them in the know. Send out automated pages containing key incident data and system-wide alerts on people, vehicles, and addresses. Configure your system to send out pages, emails, or texts to individuals or groups based on specific incident codes.

Your system can be set up to give you both visual and audible reminders when it's time to perform status checks or to follow up on an incident. **Zuercher CAD** can be fully integrated with Zuercher Mapping, allowing you to plot incidents, get unit recommendations, select routes, search addresses and more, on an interactive map that functions hand in hand with your CAD.

Replace the Paper -- Share Your Data.

With **Zuercher CAD**, everyone has less paperwork to fill out at the end of the day. Replace your paper with Zuercher Custom Forms, part of your Zuercher software system. You can draw on data from **Zuercher CAD** to build case reports in Zuercher Records. Everything comes over automatically: command logs and response times. Even NCIC returns. No more calling dispatch to give you that DOB. Understand and distribute your CAD data with Zuercher Custom Reports. Track response times. Compile statistics. Do crime analysis. It's just that easy.

Make It Happen.

Get ready for a CAD solution built with your communication center in mind. Contact our sales team for information or a demonstration of **Zuercher CAD**.

Core Features

- Bulletins
- CAD Command Log
- CFS Log
- Command Line
- Configurable CAD Windows
- Custom CAD Commands
- Inactivity Alarms
- Triple I
- Rip and Run
- Unit Alarms
