

A Public Portal: Under Your Control.

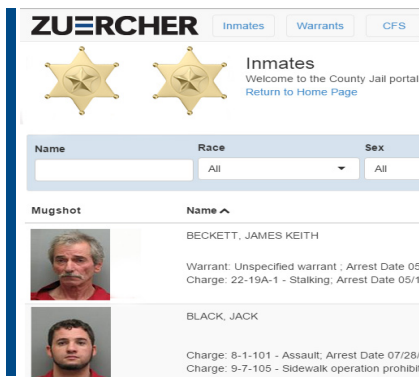

You spend more time than you'd like getting information out there. You're answering phone calls at the jail asking if certain inmates are in custody. Running and loading a weekly list of sheriff's sales to a website. Other agencies -- and sometimes even your own people -- could use a way to log in and get what they need without a phone call.

Secure Access. Anywhere.

Zuercher Portal is a secure, web-based access point that can be used for agency employees, other agencies, and the public to have access to warrants, jail inmates, case reports, and CAD data in real time, outside the Zuercher software system. You have a public entry point and you control who can access it and what can be seen. Configure your system to determine what you want to share. It does the rest.

Zuercher Portal

Better Agency Visibility.

You have information that you need or want to provide to the public. **Zuercher Portal** sets up an easy way for the public to be able to search and view select data from your Zuercher software. Read-only data ensures that records can't be changed. You determine with fine grained permission levels what information is shared. And what isn't.

Configure **Zuercher Portal** to pull the information you need automatically: cases, warrant lists, sheriff's sales, sex offenders, current inmates. Even reports for media. It's all there for the public. Without taking staff time to compile data or upload it to a website.

Provide a place to submit citizen feedback, crime tips, comments, or request extra patrol. Your agency is more accessible and approachable. Plus, you take less time to do it.

Internal Communications Made Easy.

When your officers need to reference a case or check the status of a warrant or civil paper, they can log into **Zuercher Portal** from a smartphone or computer anywhere. It's the perfect tool for keeping connected. Or you just want an overview of what's happening when you're not there.

Zuercher Portal is ideal for sharing information with other agencies, such as fire, EMS, or game wardens. During an emergency, they'll have the real-time data they need to assist you. After a call, they can retrieve the information they want when they need it.

Make It Happen.

Get ready for a public portal that saves you time with tightly controlled remote access to your software system. Contact our sales team for information or a demonstration of **Zuercher Portal**.
