

It's Your Data: Use It. Generate the Reports You Need.

Everyone always wants statistics. But how much time does it take to get your data back out of your software? Chances are, you're printing screen shots from your current system just to get the numbers you need. Building a new report requires coordination of multiple departments to get it done. You're not sure the report is even giving you good data. You don't trust your stats. And you know it just shouldn't be this hard.

Built Into Your System.

Zuercher Reporting is the user-friendly, built-in report generator for Zuercher Suite. Your data is already there in your system. Access everything you need to build a report on the software you use every day. Your numbers are real. Complete. Accurate.

Get what you need to create reports without having to run queries on separate software. Or spend time

digging in multiple places to re-create statistics. Don't ask your already overloaded IT staff to create something for you. You already have everything you need.

Easy to Use: We'll Help You Set It Up.

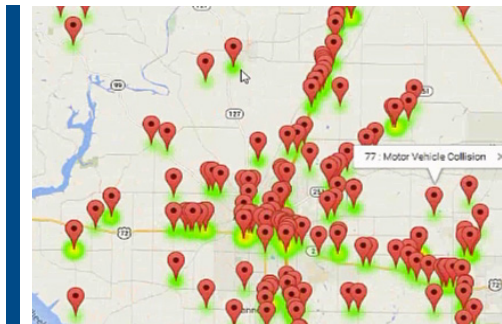

It doesn't matter if you've never built a report before in your life. The reporting screens are simple and intuitive. To build a template, simply select the data elements you want for your report. Drag and drop fields on to the report. Filter it to meet your needs. Then save. You're not forced into someone else's format. Create your own.

Zuercher Reporting provides options to gather the information you need: adding things up, figuring out the average, counting occurrences. Adjust the font and add some field names and you're ready to print, save, or

email your results. If you have any difficulties, our support staff will walk you through putting your template together.

Pick Your Format.

Not only does **Zuercher Reporting** give you access to the information stored in Zuercher Suite, it gives you options when it comes to getting that information back out of the database. There is no limit to the number of report templates you can create and share. You just decide how to use it.

Zuercher Reporting lets you pull numeric data into your reports. Or with a few clicks, it will present your data as a colored bar graph or line chart. If you use the Zuercher Mapping map server, you can even present your information as a “heat map,” plotting your data by real-life location. Set up the report template, including the MS Word or MS Excel output with your agency’s logo and header on it. Ready to share. Reports can even be provided over the web using JSON, XML, or TXT.

Automate It. And Schedule It.

Log in and run any report you need. Whenever you want. Or set up regular reports so you don’t need to remember to run them every day, or week, or month. Generate a media report every morning prior to your daily press conference that can be accessed in your files by anyone on your team who handles public information or press requests. Or e-mail a PDF of a weekly digest of open cases to your prosecutor who can log into an interface and check the latest changes. Create a report for whatever you need. Schedule it and check it off your list.

- Email Distribution List
- Export to Excel, PDF, or CSV
- Granular Access Permissions
- Graphs: Line and Bar
- Heat Maps
- List Style Reports
- Report Templates
- REST Interfaces
- Sharing Settings
- Statistical Analysis

“YOU CAN PULL ANY FIELD THAT’S AVAILABLE.

IT GIVES YOU ACCESS TO ANYTHING, JUST A BEVY OF INFORMATION, AND THEN YOU CAN FILTER IT.

AND THAT’S THE FLEXIBILITY.

YOU’RE NOT BUILT INTO SOME OFF-THE-SHELF REPORT THAT MEANS NOTHING TO YOU OR IS NOT PARTICULAR TO THE MOMENT.”
